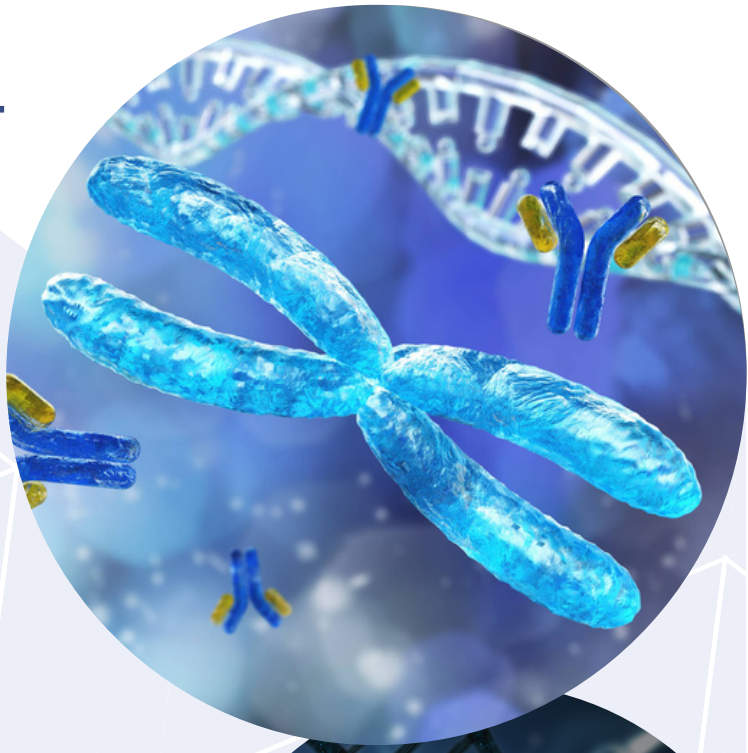
# Uncovering Mutations in Your DNA

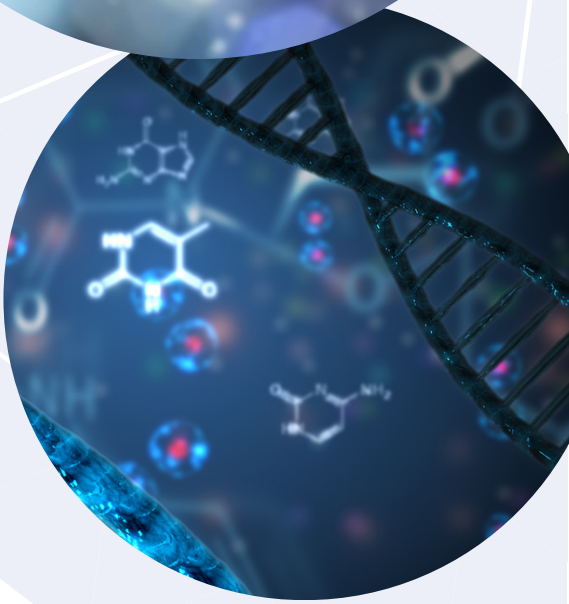
& providing clinically actionable data for choice of the most optimal treatment

## HEREDITARY CANCER PANEL



Some cancers are known to be associated with mutations in cancer pathway genes that have been genetically transmitted, often through several generations. With increase in substantial data being published on the increased efficacy of MGPT (Multi Gene Panel Test), most cancer geneticists seem to be adapting the idea. Understanding the molecular etiology of a cancer occurrence can help guide treatment and proper surveillance. Our Hereditary Cancer panel is a Next generation sequencing based Multigene panel which tests for variants in multiple genes that have been associated with increased cancer risk and thus give you the power to identify your risk of developing over 15 types of cancers simultaneously. This test covers more than 140 genes and helps to improve diagnostic yield and deliver more comprehensive results.

## IMPORTANT CANCERS COVERED:



- Breast
- Ovarian
- Colorectal
- Endometrial
- Gastro-Intestinal
- Renal
- Pancreatic
- Brain
- Eye
- Osteosarcoma
- Rhabdomyosarcoma
- Familial Melanoma
- Familial adenomatous polyposis-1
- Endocrine tumors including multiple endrocrine neoplasia 1
- Lynch syndrome

# HEREDITARY SYNDROMES ASSOCIATED WITH SINGLE GENE DEFECTS:

- Von-Hippel-Lindau
- Li-Fraumeni
- Birt-Hogg-Dube
- Gorlin
- Fanconi Anemia
- Turcot syndrome
- Bloom syndrome
- Gardner syndrome
- Familial Wilms Tumor
- Noonan syndrome 1

## SAMPLE

- 3 ml BLOOD in EDTA/ Lavender top tubes

## WHO NEEDS THIS TEST?

- A family member with more than 1 type of cancer
- Family members who had cancer at a younger age
- Close relatives with cancers linked to rare hereditary cancer syndromes
- A family member with a rare cancer, such as breast cancer in a male
- Confirmation of a clinical diagnosis of an inherited cancer

## WHY THIS TEST?

- Genetic level confirmation of diagnosis
- Assess your risk of developing a cancer if your family members are affected
- Helps your physician to develop personalise monitoring plans to manage your risk
- Some germline/inherited mutations have actionable therapy implications

## GENES COVERED IN THIS PANEL:
